

A2Z Computing Ltd

Your Netbook/Fizzbook (Classmate PC) not connecting to your Windows Domain?

Use the Network Connector

Licensed per station

The Network Connector for FizzBooks is designed to provide access to network files and printers on a FizzBook PC running Windows XP Home Edition. It does this by presenting the user with a window to enter their network username and password. If valid, it maps a network for their home directory and also installs a network printer if required.

Call A2Z Computing on 01633 676543 or email sales@a2z-computing.com to discuss licences
