Protection

Sophisticated yet simple security for your desktop environment.

Sophos Endpoint Protection makes it simple to secure your Windows, Mac and Linux systems against malware and advanced threats, such as targeted attacks. Our next generation endpoint protection integrates innovative technology like malicious traffic detection with real-time threat intelligence from Sophos Labs to help you prevent, detect and remediate threats with ease. Web, application, and peripheral access policies can follow your users anywhere they go. And, your firewall and endpoints can share a security heartbeat.

Sophisticated simplicity

Sophos Endpoint Protection delivers sophisticated functionality coupled with a simple, intuitive user experience. Quick and easy deployment, well-balanced default policies and automatic configuration of HIPS are just a few examples of how we do things differently

Enable mobility

Mobile device management (MDM) in Sophos Cloud lets your users stay productive on the move, while keeping your corporate data secure. And with unified management, you get clear visibility on all devices and policies from a single, unified console.

Lightning performance

Sophos Endpoint Protection is continually tuned for the best performance. The lightweight agent keeps users secure without slowing them down. Protection updates are small *typically under 30 KB* so updates are easy on your network and your endpoints.

Innovative protection

Sophos Endpoint Protection goes far beyond signature-based prevention of known malware. It correlates suspicious behaviours and activities using real-time threat intelligence from Sophos Labs. From malicious URLs to web exploit code, unexpected system changes to command-and-control traffic, we'll connect the dots so your endpoints and data are protected. The result is fewer infected computers and better protection against targeted attacks and data breaches.
